

## Case Study

- + Construction
- + Mechanical
- + Electrical
- + Refurbishment

An existing client came to us with a request for a large scale warehouse fit-out and electrical install. This five-week, large-scale refit was coordinated and installed in line with the client's full specification.

We reconfigured the layout of this large site and created a new entry system to enhance security throughout the building. On the warehouse floor, we created 150 new workstations around the conveyor belts, with additional managers' stations throughout.

We installed a new fire aspiration system across the warehouse and externally, we installed 100m of new weld mesh security fencing around the car park and Armco barrier protection. A new covered walkway was built between the main building and the warehouse for bad weather.

We fully upgraded LED lighting, installed four new conveyor belts, inbound and outbound work areas, and multiple data points across the site.
