

Case Study

+ Mechanical & Renewables

Featherstone House

SOL Services successfully delivered a comprehensive refurbishment of Featherstone House, covering both warehouse and office areas.

The project involved a full strip-out, including the removal of a mezzanine, followed by a complete mechanical and electrical upgrade to transform the facility into a modern, efficient space.

The works included welfare upgrades to enhance the comfort of the space, a new HVAC system integrated with a BMS panel for optimised climate control, and energy-efficient LED lighting upgrades throughout. EV chargers were installed to support sustainability goals and future-proof the site for electric vehicle use.

The reconfiguration of office layouts was tailored to meet the client's operational needs, ensuring the space was both functional and future-ready. This government project demonstrates SOL Services' ability to deliver high-quality solutions on time and within budget while adhering to stringent requirements.

Value
£1.7M

Duration
20 Weeks

Key Services

- + Welfare upgrades throughout
- + HVAC system installation and BMS panel integration
- + LED upgrades across the site
- + Installation of EV chargers
